

SEA 400
D A K A
PASSION FOR
INNOVATION

A standard Sea Scooter VS Supercharged was converted into a remote-control demonstrator model for Daka Europe to use at trade fairs in the UK, France and Spain. A weighted base allows the model to be placed in a water tank and remain stationary whilst running; a mains power adaptor allows the model to be run continuously (as a device to attract the interest of visitors) or in bursts (using the remote control handlebar unit) and also charge the internal lead-acid battery to enable use away from mains power. The whole unit is sealed to permit prolonged immersion.
